

## Introducing Enterprise Portfolio Simulator 2011

ALLENTOWN, PA — July 20, 2011 - ProModel Corporation is proud to announce the launch of **EPS (Enterprise Portfolio Simulator) 2011**. According to the Harvard Business Review, companies that invest in analytics outperform the S&P 500 on average by 64%. EPS can help an organization strengthen its analytic capabilities by providing a simulation based predictive planning environment in which to run “What-If” scenarios on their project portfolios. EPS is a Rich Internet Application that can be configured as a standalone system, a bolt-on to Microsoft Project Server, or integrated with other PPM (Project and Portfolio Management) systems.

“We are pleased to release EPS 2011 with many improvements and easy to use features” said Kevin Jacobson EPS Product Manager. “As a Microsoft Silver PPM Competency Partner, we deliver a dynamic web user experience using the latest Microsoft Silverlight Technology and provide easy integration with Microsoft Project Server so that existing PPM platforms are enhanced, not replaced.”

Many companies already have established practices and PPM platform infrastructure, yet according to one of our customers in the retail industry, it is estimated that most IT projects are delayed and 200% over-budget. Today’s global management teams require this infrastructure and visibility to be more effective, however, in order to maintain or gain a competitive advantage, this static view is no longer good enough. Organizations in many industries are taking this one step further by adding a predictive analytic capability on top of their PPM systems.

For example, one of our customers in the Pharma industry is using EPS with Microsoft Project Server to plan resource capacity for their entire portfolio up to 7 years into the future. Since their portfolio is a moving target, they perform a fresh analysis using Enterprise Portfolio Simulation each month.
